

Vulnerability Remediation **Top Pain Points**

— #01

Too many alerts, tools or processes, not enough people

— #02

Lengthy time to vulnerability discovery is leaving open attack surface

— #03

Patches can't be applied for business or technical reasons

— #04

Not enough third-party application support from vendor library

— #05

Extensive time to remediation is leaving windows for exploitation

— #06

Manual validation processes to assure remediation take up time
